

Cataloging Priority List (Overview from Deb)

	Issue	SDLN Response
1	Have timely, scheduled, and accurate batch loading for OCLC, Marcive, and Authority Records.	* OCLC record batch loading is now timely. Outstanding issue is to enhance the overlay. * Marcive and Authority record batch loading pending.
2	Inform users if there are any changes in batchloading schedule.	This has been done since the UG meeting in May.
3	Suppress the STA \$\$a SUPPRESSED records from the OPAC.	This is an OPAC issue, and can be decided library-by-library.
4	Automatically create 852 subfields a, b, and c, when creating holdings records manually.	
5	Make global changes.	We can do this in many cases. Requests for changes must be forwarded to us, as the updates are done on the SYS01 databae, and librarians do not have access to make chnages in that database.
6	Print spine labels.	A program from the University of Minnesota is now available. Does this satisfy the need?
7	Make Total Record Delete work consistently.	If it is not "consistent", how is it not?
8	Create summary holdings statements using tag 866 for the OPAC	The way this was going to be done did not seem to be satisfactory.
