

Client Priority List (Overview from Deb)

	<b>Issue</b>	<b>SDLN Response</b>
1	Prevent .INI from being overwritten.	We believe steps have been taken to avoid this problem. Please let us know if there is a recurrence.
2	Prevent Cataloging from locking up (MIT & SDB) (too many new.mrc records?)	We cannot duplicate this problem reliably. If there is a certain sequence that will always lock up the client, please advise.
3	Eliminate screen scrolling when using space bar.	
4	Remove PALS record number Advanced search option.
